PROJECT'S

◇ Airline Reservation System -The "Airline Reservation System" aims to provide online ticket & seat reservations of National and give us information about flight departures. In this project, you can create/update/delete passengers, add flights and their schedules, and make/update reservations with interactive UI.

◇ Vegetable Store App-We developed this Vegetable Delivery Application in Android Studio using Java and its native Android app. The main aim of this android project Vegetable Delivery is to manage all the details about customers, Vegetable, orders, etc. In this project, customers can buy vegetables, make payments, see the order history, etc.

◇ Spotify-Clone Using HTML AND CSS-As part of learning to code, I completed a project that involved creating a basic Spotify clone using HTML, and CSS. This project was designed to showcase my skills in front-end web development.

EXTRA CURRICULAR ACHIEVEMENTS

◇ Participation in Camps.
