- | | |
|--|--------------------|
| • B E in Computer Engineering | 2021 - 2024 |
| Konkan Gnyanpeeth College Of Engineering | CGPA : 8.3 |
| • Diploma in Computer Engineering | 2018 - 2021 |
| Pillai Hoc Polytechnic | Percentage : 85.71 |

PROJECTS

Image Tampering Detection

- Developed a website for detecting the image whether it is tampered or not.
- This is a group project in which we have a team of 3 people.
- In that, we have performed image analysis research on whether the image has been manipulated.
- We used Convolutional Neural Network(CNN) for image tampering.
- This project shows the percentage of image tamperation.
- Once we have given the image, it detects how much the image is tampered.

Railway Reservation System website

- Developed a website on Railway Reservation booking using front end.
- This is a solo project in which I have used Core java concepts
- The core java OOP concepts such as Encapsulation, Inheritance, Polymorphism and Abstraction are used in this.
- Also I have used password locking concepts like Validation and Verification.
- But because this project doesn't contains any database, so it is not that much full proof.

WordPress Website

- Implemented a website by using WordPress and various plugins like Elementor Page builder by using PHP language.
- Wordpress is nowadays very trending and dynamic as well as open source software which users can install, modify and also can create a stylish website which is very easier.
- This is completely a solo project in which I have used so many plugins and a very popular and effective page builder that is Elementor.
