Final Year Project:

Design and Fabrication of Crop Cutter Machine

In our project we are fabricate a crop cutter machine. The crop cutting is important stage in agriculture field. Currently in India farmer used conventional method for crop cutting i.e. cutting of crop using labour but this method is lengthy and time consuming. This project aim is to design and fabrication of crop cutter machine. It helps to reduce farmer' s effort and reduce time and to complete crop cutting work in time. The machine consists of engine and different mechanisms. We are using a single knife reciprocating cutter whose one blade is moving and other is stationary. When compare to manual crop cutting by using this machine has a capacity to cut the crop in faster rate and economical.
